

1. **Which component is considered the "brain" of a computer?**
 - A) Hard Drive
 - B) Motherboard
 - C) Central Processing Unit (CPU)
 - D) Random Access Memory (RAM)

2. **What is the fundamental language that computers understand, consisting only of 0s and 1s?**
 - A) Python
 - B) Binary
 - C) Hexadecimal
 - D) Assembly

3. **What does RAM stand for?**
 - A) Read Access Memory
 - B) Random Access Memory
 - C) Rapid Action Memory
 - D) Run All Memory

4. **Which of the following is considered an Operating System?**
 - A) Microsoft Word
 - B) Google Chrome
 - C) Linux
 - D) JavaScript

5. **In computer science, what is an algorithm?**
 - A) A step-by-step set of instructions to solve a problem
 - B) A physical hardware component
 - C) A type of malicious software
 - D) A device used to connect to the internet

6. **Which language is the standard for structuring and creating web pages?**
 - A) C++
 - B) Java
 - C) Python
 - D) HTML

7. **What is the primary difference between RAM and a Hard Drive?**
- A) RAM stores long-term files; Hard Drives process graphics.
 - B) RAM is non-volatile; Hard Drives are volatile.
 - C) RAM is temporary, fast memory; Hard Drives are permanent, slower storage.
 - D) RAM connects to the internet; Hard Drives do not.
8. **What does "HTTP" stand for in website addresses?**
- A) HyperText Transfer Protocol
 - B) High Transfer Text Process
 - C) Hyperlink Transfer Technology
 - D) Host Transfer Text Protocol
9. **Which of the following is a fundamental concept of Object-Oriented Programming (OOP)?**
- A) Compiling
 - B) Inheritance
 - C) Formatting
 - D) Debugging
10. **What is the main function of a firewall in a computer network?**
- A) To speed up internet connections
 - B) To monitor and control incoming and outgoing network traffic
 - C) To prevent the computer from overheating
 - D) To back up deleted files
